Hot news from cold Finland

Our amplifier weights about 6 kg and has a built in LP-filter and a control board for SWR , overdrive and overheating protection. Effective cooling is insured by a large heat sink and two fans.

Band switching is automatic when using the YAESU FT-1000MP. You can also use manual band switch located on the front panel combined with band indicator LEDs.

Naturally no tuning is needed with these broadband amplifiers. Output power and SWR are indicated by LED bars on the front panel. There are also LEDs indicating auto band switching mode, overheating failure and on-the-air status.

FF-1001 amp on top of FF-5050 power supply.
FF-1001 dimensions 285x205x110 mm

Price USD 3990

Includes FF-1001 amp, FF-5050 PS, flight bag and shipping via UPS.

Cover the world with FinnFet amplifiers!

Our power supplies are all switch mode type-very light weight and specially designed for no interference on HF.

For example, our FF-5050 for 1kW amp weights only 2,8 kg!

You can stack the power supply modules to achieve more amperes for bigger amp types. Optional 230/110V input (+100 USD)

Sincerely Yours
