# IARU 2009 DA0HQ log analysis

#### DA0HQ LOG ANALYSIS

#### **EXECUTIVE SUMMARY**

What follows is an analysis of DA0HQ's log of the 2009 IARU HF Championship to prove the many serious irregularities and rule-breaking contacts contained in it. The proofs of invalid contacts and other unethical practices are overwhelming, as described below and on the extracts from the log listed on the appendixes.

Probably many of the fraudulent practices discovered here were not made with the complete knowledge of all of DA0HQ's operators. Most probably these fraudulent activities were done by a small part of that team or by external people, but with the necessary knowledge of its responsible managers in many cases. Many honest operators of DA0HQ will feel ashamed of these findings and will reprobate these practices.

The findings can be classified into 4 different categories that go from direct plain illegal actions to other unsportmanship practices:

- 1- Pirated calls repeated on many bands.
- 2- Massive usage of "QSO padding" on all bands.
- 3- QSO padding even within DA0HQ stations!!!
- 4- Self announcing of HQ station frequencies.

#### **<u>1.- Pirated calls repeated on many bands</u>**

As will be detailed in the following points, some suspicious repeat patterns of consecutive calls were discovered at different bands. A random sample of these calls with suspicious band changes and with exactly the same patterns of appearance were extracted and an email was sent asking for confirmation to some calls from that sample.

At the time of this writing a total of 15 fully confirmed plus 12 highly doubtful QSOs, corresponding to 4 different calls were confirmed as not been done by their legal holder. As time passes these figures are expected to increase when responses to requests of confirmation are received.

These cases of illicit usage of a callsign is not at all a case of busted calls. A busted call comes from a mistake when copying a call, which has a certain statistical incidence. This is absolutely not the case. In all the cases of this illicit usage of calls, the pirated call appears on several bands and is surrounded with the very same callsigns. It is absolutely impossible that different operators made the very same mistake in copying one call on the different bands or modes. These pirated calls are in all cases part of a list of other calls that systematically are repeated on different bands.

**Appendix 1** contains the emails where the true legal holders of the usurped calls declare that the contacts were not done by them nor with their consent.

## 2.- Massive usage of "LOG padding" on all bands

LOG padding is a pernicious practice in contests defined by IARU r1 on its HF MANAGERS HANDBOOK (page 9.1-3) as a practice "where the same station contacts the contest station repeatedly using different callsigns". This IARU Handbook also warns about this issue and recommends contest committees that "organisers need to consider whether or not it is necessary to warn competitors against, and set penalties for issues such as log padding and uniques".

The **ARRL general rules** strictly prohibits this practice of LOG padding and clearly states in its rule 3.3

#### General Rules:

3.1. All operators must observe the limitations of their operator licenses and station licenses at all times.

3.2. All callsigns and exchange information must be sent, received, acknowledged and logged correctly by each station for a complete QSO.

3.3. An operator may not use more than one call sign from any given location during the contest period.

The **ARRL general rules** are of full appliance on this specific point for this contest, as the **IARU HF Championship Rules** state in their rule 14:

#### 2009 IARU HF World Championship Contest Rules

**14-** Additional Rules. For situations not covered in these rules refer to the ARRL General Rules for All Contests and the ARRL Rules for Contests on Bands below 30 MHz"

DA0HQ LOG contains hundreds of QSOs of LOG padding. Many of them are very easy to identify by just checking the operators lists of the submitted logs to the ARRL, either when a special call is used or in the case of multiop stations.

Several German special contest calls that submitted a log appear on DA0HQ LOG, both with that contest call and also with the operator's own callsign. In most cases both calls appear one following the other as a evidence that the QSO, if made, was done by the same operator.

Appendix 2 contains the <u>273 cases identified from the submitted logs</u> where the same operator is logged using two different callsigns.

Another many cases of LOG padding were identified by observing identical sequences of callsigns being repeated on different bands/modes at the same time. For example the sequence DK8RE, DL0MUE, DP5E, DF0NG, DF0MFL, DL0BRA appears first on 160CW and then the very same sequence is repeated on 160SSB, following later exactly

the same sequence with the very same order on 80CW and then 80SSB and subsequently on all the other band/modes. It is extremely improbable that these calls were managed by different operators or different stations that synchronized themselves with such a high degree of martial precision when changing bands. It is obvious that all these calls belong to a list that was either inserted manually into the LOG or handled by one single operator or station.

This similar pattern was found in many more other lists of QSOs. When looking at QRZ.com it was found out that <u>many of the lists were composed by callsigns that</u> <u>belong to the same holder</u>, who had either two calls or a special call for contest. It is absolutely obvious that they were managed by the same operator or station (if they were done on the air, which is very doubtful).

In some occasions (eg DP7X, DN1WT, DL5YYM) the true holder of a callsign included in one of those lists replied to our request for confirmation of those QSOs that he had not made such contacts and that he had not either given any permission to anyone to use his callsign. This supports the idea that in many cases, the QSOs were inserted manually into the log or by someone using more than one callsign.

**Appendix 3** contains all QSOs that were identified as being part of a list that was repeated regularly on different bands or modes The pattern of repetition is easily observed there. The original holder of the callsign is also shown from QRZ.com.

The impact of this prohibited practice on DA0HQ log is very high, adding another subtotal of 1131 fraudulent QSOs of LOG padding. The relevant thing here is that this huge figure of padding QSOs were generated by only less than 30 individuals, being generous and considering that all of the QSOs do come from real on-air contacts, which is indeed very doubtful.

The total LOG padding QSOs that could be identified add an amount of 1469 fraudulent QSOs

- QSO padding as declared by correspondent on submitted logs:	273 QSOs
- QSO padding identified from identical repeat patterns (lists):	1131 QSOs
- QSO padding from own HQ club-stations:	65 QSOs

TOTAL QSO padding identified	1469 QSOs
------------------------------	-----------

Probably many more cases still remain undiscovered in the LOG if other lists of padding callsigns were scrambled or did not follow a regular pattern. For example, the calls DK2GZ and DL/K2GZ belong to the same person and both calls appear on several bands but at different times. The operator took care of not repeating the QSOs with the two calls sequentially.

## **<u>3.- QSO padding even from own HQ stations.</u>**

DA0HQ LOG surprisingly contains some of the home calls of the club-stations from which the HQ station was transmitting. This fraudulent practice is another version of the LOG padding described on the previous point, but in this case it is made from the very same station from which some of the HQ stations were operating, which makes it even more unacceptable.

None of these club-stations submitted to the ARRL a log nor a checklog. It seems that they had not contacted any other more stations during the contest apart of their own HQ.

Even more astonishing is the case of the club station based (as per QRZ.com) on the HQ QTH of Ilmenau, whose all four different calls DA0DOK, DF0DOK, DL0DOK, DK0DOK appear in the log on several bands during the very last minutes of the contest. QRZ.com confirms that the responsible of that club-station, DA0DOK et al, is Lothar Wilke DL3TD, manager of the 2009 DARC HQ operation. QRZ.com also confirms that the coordinates of the site of those callsigns is the same of the Ilmenau station from which DA0HQ operated 160mSSB, 80mSSB, 40mSSB and 15mSSB.

DL0MBG is the club station from which DA0HQ operated 10CW (see the extract from web page www.da0hq.de, appendix 4). The responsible of that club callsign (as per QRZ.com) is precisely DL8ALU, one of the operators of DA0HQ. This callsign appears in the LOG linked to a list that also includes DG5AA and DL8ATI. This list is repeated on several bands with exactly the very same sequence of callsigns. All 33 QSOs are made in the very last half-hour of the contest.

DL0MB is the station in Rastatt that DA0HQ used for 40CW (see extract from webpage da0hq.de at appendix 4). This callsign appears in all the 12 band/modes and surprisingly all QSO were made in 13 minutes!!!. Well, not a big deal if you have access to the log.

DQ8N is a club-station that appears 11 times in the LOG and claims on its page of QRZ.com that participated as the 10mSSB of DA0HQ in IARU 2009 (see appendix 3, point 26).

Appendix 4 contains all QSOs within this case with the description from QRZ.com of its affiliation and an excerpt from DA0HQ webpage declaring the stations that were used per band and mode.

### 4.- Self announcing of HQ station frequencies

The rules of the IARU HF World Championship very clearly state on their rule 6.5 that:

**6.5.** Use of self-spotting techniques on packet or other mediums are inconsistent with the spirit and intent of these rules.

The self-announce of any station frequencies used in the contest is therefore not limited to DX-cluster but also mentions any other technique or medium to let know the contesting community which are the frequencies of the station to be used during the contest.

Challenging this clear limitation of the rules, DA0HQ announced on several Internet web-pages, ham-radio blogs and forums, which were the frequencies that were used during all the contest. It is also obvious that by publishing extensively in many Internet mediums, the information would be fully available DURING the contest. It is absolutely no excuse that the announcement was made prior to the contest as it is clear that all that information was fully available during the contest and that its intention was to make known to the public where they were during the contest. Most German blogs about ham-radio did contain that information.

No other participant, HQ or others, made such an anti-ethical announcement as it was clearly forbidden in the rules. The common practice of announcing operations or special calls for contest on contesting and DX forums (like <u>www.ng3k.com</u> or others) never includes the announcement of frequencies in contests as self-announcement is also forbidden in all contests.

In case that unsportsmanlike practice was not enough, from the search engine of any DXcluster it is easy to see how certain German station was fully dedicated to making DA0HQ frequencies visible at all times on the DXclusters.

During the 24 hours of the contest, DK8NC made a total of 91 announcements which averages almost one every 15 minutes. No other HQ in the Championship had such a high degree of announcements by a member of its society. Being this person part of the HQ team or not, it is obvious that fair competition is not preserved with those massive actions of announcing the HQ of the own country.

### **Conclusions.**

Fair contesting is at serious danger if nothing is done.

The proofs that in hundreds of cases there was one operator or station using several callsigns are overwhelming. In many cases the proof comes from the own declaration of the operator in the submitted log to the ARRL. In many more cases the proofs come from QRZ.com stating two or more calls belonging to the same station. Even much more serious are the different cases of usurped calls confirmed to us by their legal holders.

The practices proved on this report are unethical, unsportsmanlike and directly prohibited by the Rules. We are sure that all of these practices were done by only a small part of DA0HQ team or by others external to the HQ and that true honest German operators of that team will condemn and reprobate these actions. However, it is clear that many of the LOG padding activities and all other actions discovered here, could not have been alien to DA0HQ managers. They had to be aware of actions such as some host HQ station also appearing in the log (even with 4 different calls), the fact that many of the other LOG padding reports involved DARC Section's callsigns and the massive usage of different calls by one operator or station. Violating the self-announce limitation by using other web mediums prior to the contest is another case against the spirit and the wording of the Rules.

The Contest Committee, the ARRL as delegated organiser and the IARU itself must take decisive steps to correct these practices in 2009 IARU HF Championship final scoring and take the necessary initiatives to also avoid this happens again in the future.

We are sure that ARRL Contest Committee and the IARU will act accordingly to the overwhelming proofs contained here. An entrant with such a high number of irregular and rule-breaking contacts cannot be granted as winner.

This report has only been sent to DARC and ARRL Contest Committee..

# **Appendix 1: Pirated and false multiband QSOs**

Some suspicious callsigns, that appeared on the LOG as being part of one of those lists of calls that were repeated in regular sequences on many band, were contacted and asked for a confirmation of the suspicious contacts.

Here are the replies from those hams whose calls were usurped and inserted in the LOG fraudulently.

#### 1.-DL5YYM 7 false QSOs

The legal holder of the call DL5YYM kindly replied to our petition of confirmation of the QSO with DA0HQ during 2009 IARU HF Championship. This callsign appears 7 times in DA0HQ LOG and always linked to the same list of repeated callsigns (see app. 3)

From: DI5yym@aol.com To: ea5dy@ure.es Sent: Saturday, April 10, 2010 7:46 AM Subject: Re: QSO mit DL5YYM

Lieber OM,

ich war zur IARU HF Championschip 2009 nicht QRV.

Es gibt in DL jedoch ein ähnliches aktives Rufzeichen, (DL5YM - Fred) mit dem möglicherweise nur eine Verwechslung vorliegt.

Ich bin meist in CW QRV.

73, Günter, DL5YYM

Translation into English follows:

Dear OM,

I was not QRV at the 2009 IARU HF Championschip.

There is however a similar active DL call sign, (DL5YM - Fred) so it is possibly only a confusion.

I am QRV mostly in CW.

73, Günter, DL5YYM

Unfortunately it was not a case of busted call nor mistake as the very same callsign DL5YYM appears in 6 different bands, and even one dupe!

#### 2.- DP7X. 4 false QSOs:

**DP7X** is a contest call whose legal holder, DL6IAK, kindly said to our first petition of confirmations that he was not active in the contest nor anyone with his consent.

The LOG contains this call 4 times, so it is impossible that it is a busted call.

1830CW	12/07/2009	0653DP7X	28

From: "Michael Keller" <<u>keller@gmx.de</u>> To: <<u>ea5dy@ure.es</u>> Sent: Friday, April 09, 2010 2:24 PM Subject: Re: DP7X und DN1WT

Dear Sal,

i will confirm you: neither QSO with DN1WT or DP7X or DL6IAK in the IARU Championship is done by me or with my knowledge.

73' Mike DL6IAK

Being very concerned about this misuse of his call that we had warned, Mike DL6IAK did some further investigations and found out that someone else had used his call without his consent. Here is what he found out:

Hi Sal

i did some investigations, Harry DK2GZ did use these calls, as he told me. There must be DK2GZ/DK0WT/DP7X in the log. so i think the QSOs did happen.

73 Michael DL6IAK

This also confirms that one single operator, DK2GZ, used at list several different calls to illegally grant points to DA0HQ. The sequence that appears in the LOG is DL/K2GZ, DK0WT, DN1WT and DP7X. The call DK2GZ also appears in the LOG but at different times.

#### **3.-DN1WT: 4 false QSOs**

DN1WT is a special call for education and training, whose responsible is Michael Keller DL6IAK (QRZ.com). As mentioned above, he confirms that neither him nor

anyone with his knowledge used this call.. The 4 contacts that are in the LOG are all false.

The LOG contains this call 4 times, so it is impossible that it is a busted call.

From: "Michael Keller" <<u>keller@gmx.de</u>> To: <<u>ea5dy@ure.es</u>> Sent: Friday, April 09, 2010 2:24 PM Subject: Re: DP7X und DN1WT

Dear Sal,

i will confirm you: neither QSO with DN1WT or DP7X or DL6IAK in the IARU Championship is done by me or with my knowledge.

73' Mike DL6IAK

On his further investigations, Mike could confirm that his other calls were misused by probably DK2GZ, but could not confirm this specific case.

# Appendix 2: QSO padding confirmed from submitted logs to the ARRL

This appendix contains the cases of QSO padding that are directly confirmed from the information of the submitted logs to the ARRL Every operator who used a special contest call or club callsign declares on the submitted log what was his original home call. Many of the German special calls appear on DA0HQ LOG with both the special call and also the operators own call. In many occasions one call follows the other intermediately. So it very clear that one operator used two different callsigns.

#### 1.- DF0MFL, DF0NG, DL0BRA, DL0MUE, DP5E all operated by DK8RE

As declared on the submitted logs to the ARRL (copy from IARU 2009 results)

DE0MEL (DK8	RE, op)		
	66	11	6 A B
DE0NG (DK8B	E, op)		
	66	11	6 A B
DL0BRA (DK8	RE, op)		
	66	11	6 A B
DLOMUE (DR	shëh, op)		
	66	11	8 A B
DP5E (DK8RE,	op)		
	66	- 11	6 A B
DE5KUA	60	10	6 A B

All these five callsigns operated by DK8RE plus his own call are included in DA0HQ LOG. **One operator made a total of 66 QSOs!!!** 

These different six callsigns are worked on each band/mode in a sequential inmediate order. Following are the 66 QSOs from the LOG:

1342 1	160 2009/07-12	502 DKCT (	Ω

#### 7.- A glorious exception: DL0P

This group works DA0HQ on 10 band/modes, but NONE of its operators is in DA0HQ LOG. This a team that played fair and according to the General Rules of the competition. Sadly one of the few multiop exceptions

The team was composed by:

DLØP DH1RGS, DL1GOR, DL7JSN, DK4JPC, DL7SL, DD6YG, DL7JSK, DL3SAL, DL7JBO, ops

21200	РI	15	2009(7-11	1457	DLCh	20

14002	CW	20	2009/07-12	1007	DLCh	20

# **Appendix 3: QSO padding confirmed from repeated patterns of calls on many bands**

These cases of LOG padding were identified by observing identical sequences of callsigns being repeated on different bands/modes with a very small difference on time.

For example the sequence DK8RE, DL0MUE, DP5E, DF0NG, DF0MFL, DL0BRA appears first on 160CW and then the very same sequence is repeated on 160SSB, following exactly the same sequence with the very same order on 80CW and then 80SSB and subsequently on the other bands.

It is extremely improbable that these calls were managed by different operators or different stations that synchronized themselves with such a high degree of martial precision when changing bands.

It is evident that all these calls belong to a list that was either inserted manually into the LOG or handled by one single operator or station

#### 1.- DL0MBG, DG5AA and DL8ATI: 33 QSO's

All these QSO are made in just 26 minutes..

Tramposos con cosas en común.

**CURIOSO:** DLOGH empieza a hacer el concurso a su bola y SOLO en SSB haciendo 5 QSO's (joder y un repetido encima). Pero algo pasa el dia 12 a las 00:06 pues empiezan a entrar todos estos indicativos a saco, usándose incluso el DLOGH que ya tenía QSO's con DAOHQ. Alguien lo usó y no sabía que ya tenía varios QSO's. Estarán anotados en el log?

#### 15.- DF8XC, DR1X, DF0DX and DM2K: 50 QSO's

# Appendix 4: QSO padding from own HQ stations

## A.- DL0MB

DA0HQ on 40m CW used the club station DL0MB placed in Rastatt, This callsign also appears on all bands in the LOG. Who was operating this station that contacted itself using another callsign, its original one?. Did they contact anyone else in the contest or it was just a shameful unique?

DL0MB appears on 12 band/modes. All contacts are made in just 13 minutes, from 16:45 to 16:58. Was it that fast thanks to the online access to all band logs? However it was, this self-contacting is against all kind of ethics in contesting and fair play.

### C: DL0DOK, DA0DOK, DF0DOK, DK0DOK

This case even deserves more reprobation as <u>all four calls of the same station</u> that hosted DA0HQ were included simultaneously in the LOG.

This radio-club shows in QRZ.com the very same QTH station and coordinates that the Ilmenau station that operated 15/40/80/160m SSB for DA0HQ. The responsible of these four callsigns is DL3TD, the manager of the DA0HQ team.

All 20 QSOs logged with these 4 callsigns are made at the very last 30 minutes of the contest. Why do these callsigns appear only at the very end of he contest? Did they contact anyone else?. Apart of being a fraudulent case of LOG padding, most probably these callsigns are "uniques" which would make this practice even more unethical.
